The letters used to represent the numbers are variables, and combinations of letters and numbers are algebraic expressions. Here are a few examples. are a set of manipulatives that are designed for modeling algebraic expressions visually. Each tile is a geometric model of a term. The set includes representations for positive/negative 1, x , and x^2 . The manipulatives can be used to model addition, subtraction, multiplication, division, and factoring of polynomials. For our purposes, the domain will usually consist of numbers which do not result in a zero denominator. We can also find the values of expressions where the variable values are fractions, as the next example illustrates.
