variable. Here the variable expressions have degree one. 2) Quadratic Equation: Quadratic equation is the second degree equation in one variable contains the variable with an exponent of 2. We may look at the direction of the first step and see why: $x[1] - x[0] = -f(x[0])/f'(x[0])$. So, we have 2 roots: $x=1$, $x=3$ and a more difficult one.
